

Anti-Wrinkle Aftercare Instructions:

Avoid touching or applying pressure to the treated area for at least four hours following the procedure. This will help prevent the toxin from spreading to unintended areas.

Refrain from vigorous exercise, hot showers, saunas, and activities that may cause excessive sweating for at least 24 hours after treatment. Sweating can potentially affect the absorption and distribution of botulinum toxin.

Avoid lying down flat or bending over for the first four hours after the procedure. This will prevent migrating to unintended areas.

Refrain from consuming alcohol for at least 24 hours after treatment, as it may increase the risk of bruising and swelling.

Use a gentle touch when cleansing your face for the first 24 hours after treatment. Avoid using harsh exfoliants or facial scrubs that may irritate the treated area.

It is normal to experience mild redness, swelling, or bruising at the injection sites. These side effects are temporary and should subside within a few days. Applying a cold compress to the area can help alleviate any discomfort and reduce swelling.

Avoid undergoing facial massages, facial treatments, or other cosmetic procedures in the treated area for at least two weeks after your treatment.

If you experience any unusual or severe side effects, such as difficulty breathing or swallowing, muscle weakness, or a persistent headache, contact us immediately on 07553 465166

Attend any scheduled follow-up appointments within 2 weeks to assess the results and address any concerns or questions you may have. Should you not attend your appointment, you will incur an additional charge
